Exp6a

```java
abstract class A
{
        A()
        {
                System.out.println("This is constructor of abstract class");
        }
        abstract void method();
        void print()
        {
                System.out.println("This is normal method of abstract class");
        }
}
class B extends A
{
        void method()
        {
                System.out.println("This is abstract method");
        }
}
class demo
{
        public static void main(String args[])
        {
                B obj=new B();
                obj.method();
                obj.print();
        }
}
```
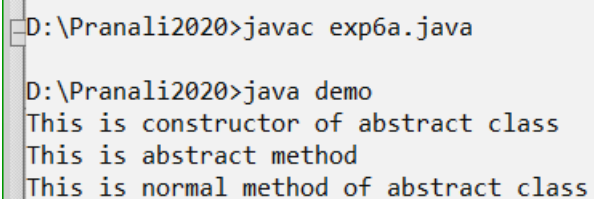

```
D:\Pranali2020>javac exp6a.java

D:\Pranali2020>java demo
This is constructor of abstract class
This is abstract method
This is normal method of abstract class
```
